Title: Sachi's next gen story
Creator: Swinburne University of Technology
Year: 2022

Audio/video for this transcript available from: http://commons.swinburne.edu.au

SACHI: My name is Sachi. I'm from Sri Lanka. I'm currently studying a Master of Business Information Systems. I wanted a qualification that could help in the strategic level of an organisation. This qualification, I feel, is sort of a bridge between business and IT. And when I studied the course structure I was really happy with it.

I chose Swinburne because it has a high standard in IT education and especially due to its focus on industry placements and Work Integrated Learning. I also wanted the opportunity to be learning from industry experts who have a lot of exposure and experience. A lot of our assignments are focused on how we would practise our knowledge in real-world situations. One of the most interesting industry related projects was where we had to analyse an organisation. We worked virtually and we met over a period of two months. We had to at first look at the organisation and study all the processes and then identify the issues and propose solutions. Most of the other group members that I was working with were also already working in the IT industry and I ended up learning a lot from them. It was really satisfying because it felt like something that we would do once we're actually working in the industry.

My plan would be to join a reputable IT firm and to work as a technology advisory lawyer, because I have a background in business and also in law and I think this qualification would really help me in my career. Swinburne is a next gen uni because it prepares us for the future.
