Click the information icon in the bottom left-hand corner.

The Cisco version will be shown just below the application name.

### For MFA to work, Cisco **AnyConnect Secure Mobility**

**Client** will need to be at a minimum of version 4.6 on Windows and Linux devices, and a minimum version of 4.9 on Mac.

#### End User License Agreement Cisco Online Privacy Statement and the AnyConnect Supplement

## INSTALLING OR UPDATING CISCO ANYCONNECT ON A SWINBURNE DEVICE

01

To update or install the VPN on a Swinburne computer, you will need to be connected to the Swinburne network by one of the methods below;

Eduroam (WiFi)

Ethernet (cable)

VPN (this requires a version of Cisco AnyConnect to already be present)

Mac users will be able to install or update the **Cisco AnyConnect Secure Mobility Client** using the **Self Service** application over the internet, without being connected to the VPN.

Once connected to the Swinburne network, on a Windows computer, you will need to open the **Software Center.** 

On a Mac, you will need to open the **Self Service** application by opening the **Applications** folder in **Finder**.

In the **Software Center**, search for "**Cisco**", and click on **Cisco AnyConnect Secure Mobility Client**.

In the Self Service portal, under "all" or "featured" search for Cisco AnyConnect without VPN.
